

Intelligent digitalization of building technology

myGEKKO –

a leading brand for intelligent building automation since over 25 years

myGEKKO automates and digitalizes buildings in a single step. This means that all systems, components and devices, regardless of type and manufacturer, are managed using a shared, standardized interface. This is made possible by the fact that our software already contains the logics of all the systems in the building. The corresponding algorithms have been developed, tested and standardized for all components.

This makes adjustments and optimization just as easy as extensions. In this way, all components can be connected regardless of the installation protocol used. myGEKKO has mastered a total of 15 protocols after all, including the most common protocols such as KNX, SMI, Modbus and EnOcean.

What sets the myGEKKO OS apart?

- › is **customizable** and **expandable** at any time
- › is scalable from **Smart Home** to **Smart Building**
- › connects all components and systems via a **uniform control concept**
- › is easy to install by a trained electrician thanks to **plug&play** compatibility
- › uses modern user interfaces
- › contains all algorithms for the **automated regulation, control** and **optimization** of the various systems
- › allows interaction with users in all phases (installation, operation, maintenance, expansion)
- › offers interfaces to the most important installation systems on the market
- › interacts with **third-party products** via the installation system or device interfaces
- › is based on the **open-source software standard Linux**
- › is growing through continuous development and is therefore **future proof** in the long term

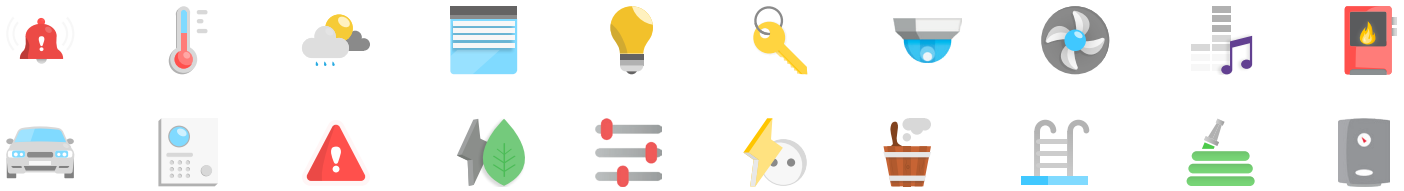

NOVA

PICO

BASE

360° functionality: automation, safety, HEMS, ICE

A unique feature of myGEKKO is that all components of the systems are raised to a common, standardized level, identical in terms of operation, control and parameterization.

Investment-proof through standards

Work with us to implement innovative and individually tailored projects of any size using a wide variety of installation systems.

Breaking new ground together

Work successfully with us on the rapidly growing market of Smart Home solutions for private residential construction and integral building technology in utilitarian buildings. Rely on a dependable partner with many years of experience.

Your advantages:

-  **Implement your projects faster and easier**
-  **Increase your service quality and customer satisfaction**
-  **Boost your competitiveness and profitability**
